

THE DYNAM 111

THE MASTER AMPLIFIER WITH **9** LIVES

Unlike other master amplifiers, the Dynam will continue to furnish TV pictures even if several of its 9 tubes fail. A broadband VHF TV amplifier, the Dynam feeds a multiple installation in a motel, hotel, trailer camp, TV store, school or hospital. Latest addition to the Ampli-Vision line of public utility-type TV distribution equipment, the Dynam has features previously available only in components selling for more than three times its price.

DYNAM'S **4** EXCLUSIVE ADVANTAGES

1. RELIABILITY

Built on the distributed amplifier principle, the Dynam will furnish continuous service even if tubes fail. This rugged reliability eliminates maintenance-contract headaches and increases profits.

2. NO CHANNEL INTERFERENCE

Picture does not spill over from the next channel to spoil TV reception. Extra-wide dynamic range permits handling of up to 7 channels at various signal levels from 75 to 30,000 microvolts at the same time without intermodulation distortion.

3. NO TUNING OR ADJUSTMENTS

The Dynam never needs tuning or adjustment. Its broadband circuits will continue to cover the entire VHF TV band regardless of changing conditions. Amplifiers may be left unattended for long periods.

4. MORE NOISE-FREE SENSITIVITY

The Dynam will give snow free pictures in extreme fringe areas where other amplifiers fail. The Dynam needs only 75 microvolts, one-fourth the minimum input signal of other master amplifiers. Cascode circuits keep snow levels down — bring picture levels up.
